

The lucide-icons package (1.23.0a) – 26/10/2026

Cédric Pierquet

<https://lucide.dev> (Source version 1.23.0)

<https://github.com/cpierquet/latex-packages/tree/main/lucide-icons> (L^AT_EX package)

cpierquet – at – outlook . fr

This package provides L^AT_EX support for the Lucide-Icons project (<https://lucide.dev>).

A set of 1745 free ISC License high-quality SVG/PDF icons for you to use in your web projects.

To use lucide-icons in your document, include the package with `\usepackage{lucide-icons}`.

An icon can be accessed using the icon name. A list of all included icons with their respective *page* can be found at the end of this document.

The individual icons are provided as pages of a PDF and are ultimately loaded using the `\includegraphics` command from the `graphicx` package.

Thanks to priiduonu for the tip with stroke color !

1 Example

```
...
\usepackage{lucide-icons}
...
\begin{document}
...
Inline \lucideicon{anchor} version, and colored \textcolor{red}{\lucideicon{anchor}}
...
\end{document}
```

Result: Inline  version, and  colored version

2 Usage

2.1 Generic macro

<code>\lucideicon[height=..., (d)strut=...]<includegraphics options>{name}</code>

Key [height=...] can be:

- `dauto` (by default): inline insertion with height/depth;
- `auto`: inline insertion with height/noddepth;
- `a length`: normal insertion with fixed height;
- `manuel height/depth`: normal insertion with fixed height/depth.

The keys [(d)strut=...] can be used to set the *reference* box for dimension calculations.

By default, icons are given with a small border, so the given height is the height of the *full* box, not the hight of the icons.

Example: Inlineversion or inline  version

2.2 Examples

```
%normal version: inline with automatic height/depth (from qX characters)
\lucideicon[height=dauto]{anchor} %or \lucideicon{anchor}
```

q⚓X

```
%normal version: inline with automatic height/depth (from specified characters)
(q\lucideicon[height=dauto,dstrut=(qB)]{anchor}B)
```

(q⚓B)

```
%normal version: inline with automatic height (from X character) default version
\lucideicon[height=auto]{anchor}
```

X⚓X

```
%normal version: inline with manual height/depth
\lucideicon[height={0.8em/-0.4em}]{anchor}
```

qb⚓Xz

```
%fixed height
\lucideicon[height=2in]{anchor}
```

2.3 Used packages

graphicx is loaded and used by the package (the key handling relies on expl3, which is part of the L^AT_EX kernel since October 2020).

2.4 Bugs

For bug reports and feature requests, report on the GitHub repository <https://github.com/cpierquet/latex-packages/issues>.

3 List of icons

The PDF file is `lucide-icons-all`.

Icons are colored in **violet**.
